

Kyndryl Applications, Data and AI Services for Google Cloud Platform

Integrated solutions for infrastructure modernization, data and analytics, and applied AI

Highlights

- In-depth assessment and recommendation for the target architecture and technology stack
- Greenfield deployments and end-to-end migration to Google Cloud Platform with packaging, orchestration, and execution
- Analytics development from business intelligence to analytics based on AI, machine learning (ML) and deep learning (DL), including AI deployment at scale
- Hassle-free system management with enhanced governance, security, and reliability, continuous improvements, and integrations

Introduction

Managing and optimizing your enterprise applications, data, and AI can be a complex challenge. Many enterprises are struggling with overwhelming amounts of data from multiple sources, along with the high cost of ownership and operations. While the need to modernize has become a strategic imperative, concerns about lengthy migration processes, business outages, manual effort, and scalability lead many organizations to put off modernization efforts.

Kyndryl and Google Cloud are working together to deliver integrated solutions and services for infrastructure modernization, data, analytics, and applied AI. Our strategic consulting, data, AI implementation, migration, and managed services help simplify enterprise data and AI strategy at scale. With Google Cloud as our strategic digital transformation partner, we are helping businesses run critical business systems on global and sustainable cloud infrastructure and seamlessly deliver applications from headquarters to the network edge — all with a focus on convenience, cost savings, speed, and scale.

In-depth assessment and recommendation for the target architecture and technology stack

We begin with an in-depth assessment of your business need, providing prescriptive recommendations for performance and a robust design following security, privacy, and compliance rules and best practices for your data.

Greenfield deployments and end-to-end migration to Google Cloud Platform with packaging, orchestration, and execution

Next, we move your existing data platforms to Google Cloud Platform, with automated legacy code and service accelerators to speed the process. Code optimization and query validation protect against business disruption, while our business logic conversion helps preserve years of business logic, workflows, and execution rule.

Analytics development from business intelligence to analytics based on AI, ML, and DL, including AI deployment at scale

AI is where modernization efforts really pay off, creating an end-to-end data supply chain to ensure seamless data processing and help you make good decisions based on data insights. Kyndryl solutions include full-stack services for enterprise AI, with a modular structure that delivers automated workflows, built-in intelligence, and a unified view across your entire data estate.

Hassle-free system management with enhanced governance, security, and reliability, continuous improvements, and integrations

Keeping data and business critical insights safe within an enterprise, along with good data and smart insights, creates a huge competitive advantage. Through decades of experience, expertise, and matured processes, our system management experts can help with continuous cost optimization, reliable high fidelity data availability, continuous monitoring, and adjusting the models regularly further enhance the ROI.

Why Kyndryl?

Kyndryl has deep expertise in designing, running, and managing the most modern, efficient, and reliable technology infrastructure that the world depends on every day. We are deeply committed to advancing the critical infrastructure that powers human progress. We're building on our foundation of excellence by creating systems in new ways: bringing in the right partners, investing in our business, and working side by side with our clients to unlock potential.

People

Services backed by the expertise of global data engineers, data scientists, data architects, data and AI strategy consultants, and our powerful partner ecosystem

Processes

Technology-neutral, vendor-independent approach with open and security-rich designs and methodologies

Technology

Production-grade data management and enterprise AI capabilities that modular, scalable, and tailored to your unique environment
