

Customer challenges

CIOs face unprecedented pressure to modernize and transform their technology in increasingly complex business and IT landscapes. The scope of their responsibility is expanding, as is the number of stakeholders they must engage with. The pressure to demonstrate the value that IT provides to their organizations has never been greater. CIOs must meet these rising expectations against a backdrop of complexity:

Technology complexity - Fueled by technical debt of legacy technology and the surge of innovation like generative AI, technology complexity is growing.

Organizational complexity - Finding and retaining the right staff to support IT objectives has become a significant challenge for CIOs.

Business complexity - Regulatory and security landscapes are becoming more complex, and businesses are increasingly relying on CIOs to play an active role.

Solution highlights

Kyndryl helps reinvent how organizations run and transform increasingly complex technology environments to accelerate growth, orchestrate functional teams, optimize spending and reduce risks. At the core is Kyndryl Bridge, an Al-powered, open-integration digital business platform that allows customers to observe, integrate and orchestrate across their entire technology environment. Kyndryl Bridge empowers organizations with actionable insights to continuously innovate, achieve higher levels of operational maturity and provide a foundation for current and future digital business.
